Title of the Project

UROP Project submitted to the

SRM University – AP, Andhra Pradesh

for the partial fulfillment of the requirements to award the degree of

Bachelor of Technology
in

Computer Science and Engineering

School of Engineering and Sciences

Submitted by

Student Name | AP21110010489

Under the Guidance of

Dr. Mentor Name

SRM University–AP

Neerukonda, Mangalagiri,

Guntur Andhra Pradesh – 522 240

November, 2026

Acknowledgements:

I would like to thank **Dr. Mentor Name** for his guidance and support given to us while working on this project. The way our mentor helped us whenever we needed his with patience and the motivation, he gave us during the time has pushed us to complete the research on time. His confidence in our team has boosted our confidence to complete the research while there are various other subject-related works and submissions. We also thank each of our team members for always being each other's constant support and for always helping each other out.

List of Figures xi

1. Introduction .....

2. Device to Device Communication .....

2.1 All about D2D.....

2.2. Inband D2D.....

2.3. Outband D2D.....

3. Energy Efficiency .....

4. Transmit Power Control.....

4.1. A transmit power control scheme for underlay D2D communication based on a DNN

5. Simulations .....

6. Concluding Remarks .....

7. Future Works.....

References .....

1. Introduction:

2. Literature Survey

3. System Model

Concluding Remarks:

The transmit power control strategy for arbitrary channel conditions. Through simulations, we assessed the performance of the proposed scheme and found that the proposed scheme can efficiently exploit the trade-off between the SE of DUE and CUE interference, allowing it to achieve higher performance than conventional schemes with a lower computation time.

Future Work:

We have examined the literature that is currently available on D2D communications in cellular networks and worked on transmit power control strategy . In this section, we'll highlight some crucial elements like typical assumptions, the extent of the work, and standard methods.
